

29

a second compartment comprising a second compartment base member;
 the Foley catheter, situated in the second compartment;
 the barrier separating the first compartment from the second compartment;
 the first compartment base member situated at a different height within the tray than the second compartment base member;
 the first compartment defining a lubricating jelly application chamber to lubricate the Foley catheter when passed from the second compartment into the first compartment of the single layer tray;
 further comprising a patient aid comprising post-procedure information, disposed on a first portion of the patient aid, for caring for the Foley catheter applied to a patient.

11. The Foley catheter container of claim 10, further comprising:
 a wrap disposed about the tray; and
 a sealed bag disposed about the wrap.

12. The Foley catheter container of claim 11, further comprising liquid hand sanitizer disposed outside the at least a portion of the wrap and inside the sealed bag.

13. The tray of claim 10, further comprising:
 a wrap disposed about the tray;
 printed instructions for using the tray; and
 a sealed bag disposed about the wrap.

14. The tray of claim 13, the printed instructions instructing dispensation of lubricating jelly from one of the first syringe or the second syringe into the first compartment and application of the lubricating jelly to the Foley catheter using the lubricating jelly application compartment.

15. A tray for a Foley catheter, comprising:
 a single-layer surface defining at least two compartments separated by a barrier, the at least two compartments comprising:
 a first compartment comprising a base member, the first compartment accommodating a first syringe and a second syringe;
 a second compartment accommodating the Foley catheter; and
 the barrier separating the first compartment from the second compartment;
 the base member defining a mnemonic device indicating which of the first syringe or the second syringe should be used to dispense lubricating jelly disposed in one of the first syringe or the second syringe into the first compartment;
 the first compartment defining a lubricating jelly application compartment to lubricate the Foley catheter with the lubricating jelly from the one of the first syringe or the second syringe when at least a portion of the Foley catheter is passed from the second compartment into the first compartment while remaining within a perimeter defined by the single-layer surface;
 further comprising information, disposed on a first portion of a patient aid, for caring for the Foley catheter when applied to a patient.

30

16. The tray of claim 15, further comprising:
 a wrap disposed about the tray; and
 a sealed bag disposed about the wrap.

17. The tray of claim 15, further comprising:
 a wrap disposed about the tray;
 printed instructions for using the tray; and
 a sealed bag disposed about the wrap.

18. The tray of claim 17, the printed instructions instructing dispensation of the lubricating jelly from the one of the first syringe or the second syringe into the first compartment and application of the lubricating jelly to the at least a portion of the Foley catheter using the lubricating jelly application compartment.

19. A single-layer tray, comprising:
 a surface defining at least two compartments separated by a barrier, the at least two compartments comprising:
 a first compartment to support a first syringe and a second syringe, the first compartment comprising one or more recesses for accommodating flanges of one or more of the first syringe or the second syringe;
 a second compartment to accommodate a Foley catheter;
 the first syringe and the second syringe, situated in the first compartment;
 the Foley catheter, situated in the second compartment;
 the barrier separating the first compartment from the second compartment;
 the first compartment defining a lubricating jelly application chamber to lubricate the Foley catheter;
 further comprising post-procedure information for caring for the Foley catheter when applied to a patient, wherein the post procedure information is disposed on a first portion of a patient aid.

20. The single-layer tray of claim 19, the first compartment further to support the first syringe and the second syringe in a non-parallel configuration.

21. The tray of claim 19, the first compartment further to support the first syringe and the second syringe so that a plunger of each syringe is predisposed to project upward and out of the tray.

22. The tray of claim 19, further comprising:
 a wrap disposed about the tray;
 printed instructions for using the tray; and
 a sealed bag disposed about the wrap;
 the printed instructions disposed between the wrap and the sealed bag.

23. The tray of claim 19, further comprising:
 a wrap disposed about the tray; and
 a sealed bag disposed about the wrap.

24. The tray of claim 23, further comprising liquid hand sanitizer disposed outside the at least a portion of the wrap and inside the sealed bag.

25. The tray of claim 23, further comprising printed instructions instructing application of lubricating jelly dispensed from the first syringe into the first compartment to at least a portion of the Foley catheter using the lubricating jelly application compartment.
